

Project Initialization and Planning Phase

Date	01 July 2026
Team ID	SWTID-2026-9325
Project Title	AI Powered Debt Relief & Financial Recovery Platform
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposed project aims to transform debt management and financial planning using Artificial Intelligence (AI). The platform provides personalized debt repayment strategies, budgeting assistance, real-time financial insights, and AI-driven recommendations to help users achieve financial stability.

Project Overview	
Objective	The primary objective is to develop an AI-powered debt relief platform that helps users effectively manage debt through financial forecasting, and real-time monitoring.
Scope	The project focuses on analyzing users' financial information, identifying debt patterns, recommending suitable repayment methods
Problem Statement	
Description	Many individuals struggle with multiple loans, high-interest debts, poor budgeting, and lack of financial literacy.
Impact	Solving these challenges will improve financial stability, reduce debt repayment time, lower financial stress improve creditworthiness, and help users
Proposed Solution	
Approach	Utilize Artificial Intelligence and Machine Learning algorithms to analyze users' financial data, predict repayment outcomes, recommend optimized debt
Key Features	• Smart budgeting and expense tracking. • AI chatbot for financial guidance..

	• Credit score improvement suggestions. • Interactive dashboard with financial analytics.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	T4 GPU
Memory	RAM specifications	8 GB
Storage	Disk space for data, models, and logs	1 TB SSD
Software		
Frameworks	Python frameworks	Flask, React Js, Bootstrap
Libraries	Additional libraries	scikit-learn, pandas, NumPy, matplotlib, joblib
Development Environment	IDE	VS code, pycharm
Data		
Data	Source, size, format	Kaggle dataset, 614, csv UCI dataset, 690, csv
