Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	- Registers a new account using an email and password. - Logs in to establish a secure, authenticated session. - Enters monthly income and expenses into the financial profile. Logs specific loan types, total amounts, interest rates, and due dates.	- Views the main dashboard to check the automated financial health score. - Submits loan details to the AI tool to evaluate settlement options. - Reviews the AI-predicted settlement amount and recommended priority level.	- Selects a high-priority loan from the dashboard for immediate action. - Triggers the system to generate a tailored negotiation strategy. - Reviews, copies, or downloads the generated formal settlement request letter.
Touchpoint <i>What part of the service do they interact with?</i>	- Registration and Login interface pages. - JWT session token authentication handler. - Profile configuration and loan setup forms.	- Interactive Financial Dashboard screen. - AI Settlement Predictor interface panel. - FastAPI analytical processing module.	- AI Letter Generator panel. - AI Interaction History log screen. - Loan management dashboard metrics.

Customer Thought <i>What is the customer thinking?</i>	• Is my private personal and financial data securely encrypted? • It is a massive relief to get all these bank loans organized in one place. • I hope entering all this detailed data gives me an accurate path forward.	• A low financial health score is stressful to see, but at least I know the truth. • Can I actually use these specific target amounts to approach my bank? • How does the AI choose which loan is my highest priority to settle first?	• This letter sounds highly professional; writing this myself would have taken hours. • I can copy this text straight into an email to my bank manager. • It's great that I can access my history here without losing my past strategies.
Customer Feeling <i>What is the customer feeling?</i>	Stressed regarding unpaid bills and due dates. Overwhelmed by organizing multiple loan accounts. Hopeful that an organized starting point will help.	Confronted by their direct debt stress level metrics. Relieved to see a concrete, realistic path toward loan settlement targets. Validated by the data-driven scoring.	Confronted by the harsh reality of their clear debt stress metrics. Relieved to see a realistic, data-backed path toward lower settlement amounts. Empowered by having clarity regarding their true repayment capacity.
Process Ownership <i>Who is in the lead on this?</i>	Core Backend Developers (Authentication & Data Security). Frontend Team (User onboarding flow & form validation).	AI Integration & Financial Processing Engineers (Gemini API & analysis logic).	Database & Frontend UI Team (Data persistence, history tracking, and export tools).
Opportunities <i>How can we improve this stage?</i>	• Integrate secure bank statement uploading to auto-fill financial fields. • Provide tooltips explaining complex terms like "overdue duration." • Add real-time input validation to prevent user typing mistakes.	• Include visual graphs showing how small changes in expenses change settlement success. • Add clear tooltips explaining how the system calculates the loan priority tiers.	• Implement an integrated email tool to send letters to lenders straight from the portal. • Create a status tracker to log when a lender accepts an AI-generated strategy.
